Week 8: 19–23 October 2026

Subject: Cybersecurity **Unit Title:** Identity, Authentication & Access **Grade:** 12

Lessons	Learning targets	Assessment tools and strategies Formative / Summative / Differentiation	Resources and links for Parents
Lesson 1 **(W8.1)** **Authentication vs authorization**	Learning Target: I can evaluate authentication and access-control choices for a given organisation. Focus: Distinguish authentication (verifying identity) from authorization (granting permissions) using school and workplace accounts.	**Formative:** Concept sort, access-vs-login mini-cases, partner explanation and exit check. **Summative:** Evidence gathered for T1-S2 access-control analysis (scheduled in W8.2). **Support:** Definitions, icon cards, labelled scenarios and sentence frames. **Core:** Identify and explain who is verified and what resources they may access. **Extension:** Critique over-permissioned accounts and justify safer access.	Identity/authentication/authorization diagram; role-card sort; fictional school LMS cases; LMS practice quiz; home conversation about secure account permissions.
Lesson 2 **(W8.1)** **Password attacks & MFA**	Learning Target: I can evaluate authentication and access-control choices for a given organisation. Focus: Recognise password attacks (guessing, credential stuffing and phishing) at a conceptual level; explain multi-factor authentication (MFA).	**Formative:** Attack-method matching, authentication-factor classification and a safe login redesign. **Summative:** Short concept checkpoint to inform the Week 8 project task. **Support:** Word bank and colour-coded knowledge/possession/biometric examples. **Core:** Explain how MFA reduces dependence on a password alone. **Extension:** Evaluate MFA choices and account-recovery trade-offs.	Safe fictional login scenarios; MFA factor cards; security-awareness video or LMS links; home reminder to enable MFA where available.
Lesson 3 **(W8.2)** **Biometrics & least privilege**	Learning Target: I can evaluate authentication and access-control choices for a given organisation. Focus: Compare biometrics and other authentication choices; apply the principle of least privilege to staff and learner roles.	**Formative:** Role-permission matrix, case discussion, biometrics benefits/limitations and peer feedback. **Summative:** Draft access-control recommendations for T1-S2 Part 2. **Support:** Completed example role matrix and guided checklists. **Core:** Allocate appropriate permissions and explain least privilege. **Extension:** Justify layered controls balancing security, privacy and usability.	Biometric authentication examples; fictional UAE school roles; permission matrix; LMS access-policy explainer; home discussion of biometric privacy.
Lesson 4 **(W8.2)** **Organisational access-risk case**	Learning Target: I can evaluate authentication and access-control choices for a given organisation. Focus: Analyse a fictional organisation and justify authentication, MFA and least-privilege decisions.	**Formative:** Teacher conference, scenario annotation, draft feedback and self-assessment. **Summative:** T1-S2 Cyberattack Investigation — Part 2: Access & Human-Factor Risk (5% of term), as specified for W8.2. **Support:** Scaffolded case and sentence starters. **Core:** Independent role-and-risk analysis with recommendations. **Extension:** Compare alternatives and defend a proportionate layered policy.	Fictional organisation case file; differentiated case worksheets; assessment rubric; LMS submission space; optional parent discussion of secure digital habits.
Homework	Complete an identity-and-access vocabulary review (authentication, authorization, MFA, biometrics, least privilege). Analyse one fictional login case and recommend two improvements.	Formative: Homework case response, vocabulary retrieval, self-check against Must / Should / Could and next-lesson feedback.	LMS recap and fictional login case; optional family conversation about MFA, password reuse and safe account recovery.
Teacher's notes / Reminders	Official Week 8 scope contains two planned lessons (W8.1 and W8.2); the four rows above are teaching segments within those lessons. Use fictional data only. Never collect passwords, biometric samples or real login details. Confirm assessment arrangements for T1-S2 (5%).

Week 8

Technology Integration	LMS account-security resources; digital concept sorting; fictional password/MFA scenarios; role-permission matrix; collaborative access-risk case analysis; online quizzes. All examples remain simulated.
Cross-curricular links	Business: staff roles, data protection, workplace access policies and operational risk. Digital Citizenship: privacy, responsible account practices, secure login decisions and respectful technology use.
External Assessment Integration	Practise interpreting security cases, distinguishing authentication from authorization, explaining MFA and least privilege, comparing authentication controls, and justifying access recommendations with scenario evidence.
Wellbeing / ATL Skills	Critical thinking, problem solving, ethical decision-making, communication, collaboration, self-management, digital wellbeing, risk awareness and protection of personal identity.
Standards	CS.HS.2.7 — Robust computing systems require data protection. Unit focus: Identity, Authentication & Access; authentication vs authorization; password attacks; MFA; biometrics; least privilege. Scope lessons W8.1 and W8.2.
Inquiry / TOK Question	Who should be allowed to access digital information, and how can organisations balance convenience, privacy and security when verifying identity?
Success Criteria (Measurable)	Scope-based Week 8 criteria — MUST: Distinguish authentication from authorization. SHOULD: Explain the purpose of MFA and least privilege. COULD: Recommend and justify an access-control approach for a scenario. Lesson 1: accurately classify login vs permission examples. Lesson 2: explain MFA and identify why reused passwords are risky. Lesson 3: construct a role-permission matrix using least privilege. Lesson 4: justify two or more appropriate safeguards using evidence.
National Identity Domain	Values: responsibility, innovation, trust and ethical technology use. Area: the UAE's secure digital society. Implementation: evaluate a fictional UAE organisation's authentication and access decisions; explain how responsible account protection contributes to a trusted, future-ready knowledge-based economy.
