Abu Dhabi City Campus Daily/Weekly Planner

Week 11: 9-13 November 2026

Subject: Computer Science | Unit: Introduction to Cybersecurity Principles and Threats | Grade: 11

Lessons	Learning targets	Assessment tools and strategies Formative/ Summative/ Differentiation	Resources and links for Parents
Lesson 1: Anonymity vs Identity Who Should Be Identifiable?	I can compare situations where anonymity or clear identification is needed and justify how each choice affects trust, safety and privacy.	Learning check: Anonymity vs Identity Scenario Sorting Activity. Sort everyday digital situations and explain choices. Start the shared Digital Privacy Case Study Analysis: identify who wants privacy, who needs identification and why. Support: visual sorting cards, vocabulary bank and sentence frames. Challenge: examine a case where one party wants anonymity but another requires identity.	Anonymity/identity scenario cards; sorting grid; digital privacy case-study sheet; teacher examples of online forums, school platforms and UAE digital services. Parents: Ask when an online service should know a user's identity and when anonymity can be appropriate.
Lesson 2: Digital Footprints and Future Consequences	I can analyse how today's privacy decisions may affect someone in the future and recommend responsible ways to protect personal information.	ONE formative submission: Digital Privacy Case Study Analysis. Explain the identity/privacy conflict, assess at least two future consequences and justify safer choices. Learning check: partner feedback and a future-impact timeline. Support: structured case, timeline prompts and impact/recommendation frames. Challenge: weigh privacy and accountability trade-offs, including why encryption does not guarantee anonymity.	Digital privacy case-study worksheet and rubric; sample digital-footprint timeline; privacy decision checklist; teacher slides and example policies. Parents: Discuss how a post or shared photograph could affect someone years later. No real account details required.
Homework	Complete or improve the digital privacy case study using classroom feedback. Write one practical rule for a safer digital footprint.	Self-check: identity conflict, two future effects and evidence-based recommendations are explained.	Review the privacy decision checklist together. Do not share passwords, personal profiles or private messages.
Teacher's notes/ Reminders			

Week 11

Technology Integration	Use teacher-created scenario cards and a digital sorting board or worksheet. Analyse fictional case studies using a shared document or LMS. Discuss privacy settings and encryption through examples only; do not open real student accounts.
Cross-curricular links	Social Studies: identity, anonymity, public trust, safety and social behaviour. Moral Education: ethical responsibility, privacy, respect and long-term digital footprints.
External Assessment Integration	No external assessment scheduled. Students practise compare, contrast, analyse and justify using realistic cybersecurity privacy scenarios.
Wellbeing/ ATL Skills	Personal Responsibility: communicate appropriately when sharing information online. Character: apply ethical/legal judgement about personal data and encryption. ATL: critical thinking, information literacy, communication and reflection; respect different privacy needs.
Standards	PG 6: Recognize and analyze security concepts. CS.HS.4.2 - High School Standard 4: Cybersecurity. Encryption is fundamental to data security and privacy. e. Compare anonymity with identification, including cases where the two parties want different levels of identification. f. Explain how privacy decisions today may cause negative consequences in the future.
Inquiry/ TOK Question	Lesson 1: When should users remain anonymous or identifiable online, and what happens when parties disagree? Lesson 2: How can choices about digital privacy today influence future opportunities, safety and trust?
Success Criteria (Measurable)	Lesson 1 - Anonymity vs Identity MUST: Sort at least 4 of 5 situations as anonymous or identifiable and give a reason. SHOULD: Compare two situations using trust, safety and privacy considerations. COULD: Justify a solution when a user wants anonymity but a service requires identity. Lesson 2 - Digital Footprints and Future Consequences MUST: Identify two privacy decisions and two possible future consequences in a case study. SHOULD: Explain the consequences and recommend two responsible actions with reasons. COULD: Evaluate a privacy versus accountability trade-off and justify a longer-term protection strategy.
National Identity Domain	Support the UAE's vision of a secure, responsible digital society. Examine trustworthy use of school systems and UAE digital services, respectful online participation, responsible information sharing and protection of personal data.
