Week 11: 9 Nov - 13 Nov 2026

Subject/الموضوع: Environmental science | Unit Title/5–4: عنوان الوحدة | Grade/12: الصف environmental

Lessonsالحصص	Learning targets أهداف التعلم	Assessment tools and strategies التقييم Formativeتكويني/ Summativeختامي / Differentiationالتمايز	Resources and links for Parents و المصادر الروابط المخصصة لأولياء الأمور
Lesson 1 Formative Check	I can apply Chapter 4 concepts by interpreting ecological evidence and explaining patterns in natural selection, species interactions, community diversity, and community change.	Formative revision • Retrieval practice and exam-style questions • Differentiated review: MUST / SHOULD / COULD • Peer checking and teacher feedback • Targeted support based on misconceptions	McGraw Hill Environmental Science — Chapter 4 Revision materials available on Teams — Term 1 Practice/revision activity available through Toddle
Lesson 2 Term 1 Summative Project — Work Session 1	I can apply environmental science concepts by developing an evidence-based response to a UAE sustainability challenge.	Summative project work session • Project planning and research • Evidence selection and scientific reasoning • Differentiated templates / checkpoints • Teacher conferencing and formative feedback	Term 1 Summative Project brief and rubric Chapter 1–4 learning materials on Teams Research and submission resources available through Toddle
Lesson 3 Term 1 Summative Project — Work Session 2	I can refine and justify my environmental solution by connecting scientific evidence, sustainability, and expected environmental impacts.	Summative project development • Product completion and refinement • Evidence-based justification • Peer review using the project rubric • Teacher feedback before final submission	Term 1 Summative Project brief and rubric Chapter 1–4 learning materials on Teams Project resources/submission available through Toddle
Lesson 4 5.1 Population Growth	I can analyze population growth patterns by comparing exponential and logistic growth and interpreting carrying capacity in population models.	Formative assessment • Graph/model interpretation • Compare J-curve and S-curve growth • Identify biotic potential and carrying capacity • Differentiated questions and exit ticket	McGraw Hill Environmental Science — Chapter 5, Section 5.1 Lesson materials available on Teams — Week 10 Activities/submissions available through Toddle
Teacher's notes/ Reminders **ملاحظات المعلم والتذكير**	Hello Parents, This week students will begin with a formative Chapter 4 revision to consolidate key ecology concepts and identify areas for improvement before moving forward. Students will then use two lessons to develop their Term 1 Summative Project, applying environmental science concepts to a UAE sustainability challenge. In the final lesson, we will begin Chapter 5.1: Population Growth. Please encourage your child to use the Chapter 4 revision materials, project rubric, and lesson resources available in Microsoft Teams and Toddle. Students should come prepared to use project work time effectively and complete required checkpoints. Thank you for partnering with us to support your child's learning and success.		

Week #10 / 10 الأسبوع

Technology Integration دمج التكنولوجيا	Students use digital revision resources, environmental diagrams and data, research tools, and presentation/project resources to review Chapter 4, develop the Term 1 project, and interpret population-growth models in Chapter 5.1.
Cross-curricular links الروابط بين المواد الدراسية	Biology: populations, natural selection, species interactions, community diversity, succession, and carrying capacity. Mathematics: interpreting population graphs, trends, rates, J-curves and S-curves. Social Sciences: UAE sustainability challenges, resource use, environmental decision-making, and human impacts. English/Communication: evidence-based explanation, scientific justification, and project presentation.
External Assessment Integration دمج التقييمات الخارجية	Students practice: • reviewing and applying scientific concepts in assessment-style questions; • interpreting ecological and population models; • selecting relevant scientific evidence; • constructing cause-and-effect explanations; • developing and justifying an environmental solution; • interpreting exponential and logistic population-growth patterns.
Wellbeing/ ATL Skills الصحة النفسية/ أساليب التعلم	Critical Thinking: Apply ecological concepts, interpret evidence, and predict environmental consequences. Research: Select reliable information and evidence for the Term 1 project. Communication: Explain scientific reasoning and justify decisions clearly. Collaboration: Give and use peer feedback during project development. Self-management: Use lesson checkpoints and feedback to meet summative deadlines.
Standards المعايير	HS-LS2-1 — Use mathematical and/or computational representations to support explanations of factors that affect carrying capacity of ecosystems at different scales. HS-LS2-6 — Evaluate claims, evidence, and reasoning about how complex interactions and changing conditions affect ecosystem stability. HS-ESS3-1 — Connect natural-resource availability and environmental conditions to human activities and sustainable decision-making.
Inquiry/ TOK Question البحث والاستقصاء أسئلة TOK	How can ecological evidence and population models help us make responsible decisions about sustainability and the limits of environmental systems?
Lesson-specific success criteria	Lesson 1 — Chapter 4 Formative Revision Learning Target: I can apply Chapter 4 concepts by interpreting ecological evidence and explaining patterns in natural selection, species interactions, community diversity, and community change. MUST — DOK 1–2: I can identify and describe key Chapter 4 concepts and interpret basic ecological diagrams/data. SHOULD — DOK 3: I can analyze ecological evidence and explain cause-and-effect relationships among organisms, populations, and communities. COULD — DOK 4: I can evaluate a change or disturbance and justify its likely impact on an ecosystem. Lesson 2 — Term 1 Summative Project: Work Session 1 Learning Target: I can apply environmental science concepts by developing an evidence-based response to a UAE sustainability challenge. MUST — DOK 1–2: I can identify the environmental challenge, key scientific concepts, and relevant evidence. SHOULD — DOK 3: I can analyze relationships among environmental factors and explain the impacts of the challenge. COULD — DOK 4: I can develop a realistic solution supported by scientific evidence. Lesson 3 — Term 1 Summative Project: Work Session 2

	Learning Target: I can refine and justify my environmental solution by connecting scientific evidence, sustainability, and expected environmental impacts. MUST — DOK 1–2: I can organize the required project components and use accurate environmental science content. SHOULD — DOK 3: I can explain how my evidence supports the proposed solution. COULD — DOK 4: I can evaluate limitations, trade-offs, and likely outcomes and justify my final decision. Lesson 4 — 5.1 Population Growth Learning Target: I can analyze population growth patterns by comparing exponential and logistic growth and interpreting carrying capacity in population models. MUST — DOK 1–2: I can identify biotic potential, exponential growth, logistic growth, and carrying capacity. SHOULD — DOK 3: I can analyze J-curve and S-curve models and explain how resource limits change population growth. COULD — DOK 4: I can predict and justify how changing environmental limits could affect population size and carrying capacity.
National Identity Domain **مجالات الربط بالهوية الوطنية**	Belonging • Students recognize their role in protecting and responsibly managing UAE ecosystems and natural resources. Global Understanding • Students connect local UAE sustainability challenges and population limits to wider environmental patterns and global sustainability. Heritage • Students connect sustainable resource use to UAE landscapes, coastal environments, water use, and traditional relationships with the natural environment.
