Week 11: 9–13 November 2026

Subject: Cybersecurity **Unit Title: Attack Chains & Vulnerability Analysis** **Grade: 12**

Lessons	Learning targets	Assessment tools and strategies Formative / Summative / Differentiation	Resources and links for Parents
Lesson 1 Map the attack chain	Learning Target: I can trace an attack path from initial reconnaissance to impact. Focus: reconnaissance, initial access, exploitation, persistence and impact.	Formative: stage-card ordering, teacher questioning and exit ticket. Support: labelled sequence diagram. Core: explain each stage. Extension: link stages to weaknesses.	Five-stage attack-chain diagram; fictional school network case; LMS glossary.
Lesson 2 Vulnerabilities and defender actions	Learning Target: I can trace an attack path from initial reconnaissance to impact. Focus: link each attack stage to a vulnerability and possible defence.	Formative: annotated case analysis and pair explanation. Support: stage/vulnerability matching. Core: identify risk at each stage. Extension: justify where to interrupt the chain.	Fictional incident evidence; vulnerability checklist; defensive controls chart.
Lesson 3 Guided attack-path investigation	Learning Target: I can trace an attack path from initial reconnaissance to impact. Apply the five-stage model to a fictional organisational incident.	Formative: guided timeline, evidence annotation and feedback. Support: partly completed timeline. Core: identify stages and weaknesses. Extension: compare two defensive interventions.	Printed case cards; incident timeline template; school LMS.
Lesson 4 Independent risk analysis	Learning Target: I can trace an attack path from initial reconnaissance to impact. Communicate a logical attack sequence and practical safeguards.	Formative: independent written analysis, peer check and reflection. Support: sentence starters. Core: justify one control per stage. Extension: prioritise controls by likely effectiveness.	Fictional incident report; analysis rubric; exit-ticket questions.
Homework	Create a five-stage attack-chain diagram and label one vulnerability and one defensive action at each stage.	Formative: diagram and brief reflection.	LMS diagram template; fictional case summary.
Teacher's notes / Reminders			

Week 11

Technology Integration	Digital timeline tools, LMS retrieval quiz, collaborative stage sequencing and evidence annotation.
Cross-curricular links	Computer Science: system/network weaknesses. English: evidence-based explanation. Business: organisational risk.

External Assessment Integration	Practice identifying attack stages, linking vulnerabilities and recommending interruption points; no Week 11 weighted assessment listed in scope.
Wellbeing / ATL Skills	Critical thinking, risk awareness, collaboration, resilience, ethical decision-making and reflection.
Standards	CS.HS.2.7; CS.HS.4.3 — Attack Chains & Vulnerability Analysis.
Inquiry / TOK Question	At which stage could defenders most effectively interrupt an attack, and why?
Success Criteria (Measurable)	MUST: Put major attack stages in a logical sequence. SHOULD: Link each stage to a vulnerability or action. COULD: Identify where defenders could break the attack chain.
National Identity Domain	Support the UAE's secure knowledge-based economy through responsible cybersecurity, digital resilience and protection of people, data and systems.
