Week 11: 9–13 November 2026

Subject: Programming | **Unit Title: Python Mini-Program Design & Debugging (Provisional)** | **Grade: 12**

Lessons	Learning targets	Assessment tools and strategies Formative / Summative / Differentiation	Resources and links for Parents
Lesson 1 Plan a small program	Learning Target: I can plan a simple Python program using variables, input and clear output.	Formative: program flow planning and teacher check. Support: scaffolded pseudocode. Core: plan a mini-program. Extension: justify data types.	Python editor; pseudocode template; sample programs.
Lesson 2 Build with conditions	Learning Target: I can use input, conversion and if/else to create an interactive program.	Formative: coding checkpoint and test run. Support: starter code. Core: build working program. Extension: add elif or logical operators.	Python editor; conditional flowchart; test-case checklist.
Lesson 3 Test and debug	Learning Target: I can identify syntax, type and logic errors and test corrected code.	Formative: debugging worksheet and peer review. Support: highlighted lines. Core: fix three errors. Extension: explain error causes.	Broken code examples; debugging checklist; Python editor.
Lesson 4 Present and reflect	Learning Target: I can demonstrate and explain a working Python mini-program.	Formative: demonstration, code explanation and exit ticket. Support: guided presentation prompts. Core: show code and test. Extension: propose an improvement.	Learner code; short demo rubric; LMS submission.
Homework	Complete a short Python mini-program with user input, one conversion, a conditional and two documented tests.	Formative: submitted code and reflection.	Python editor; LMS task checklist.
Teacher's notes / Reminders			

Week 11

Technology Integration	Python editor/IDLE, projected live coding, LMS submission and short debugging challenges.
Cross-curricular links	Mathematics: comparisons and numbers. English: clear explanation. Design: user-friendly output.
External Assessment Integration	Informal coding checks, test cases, debugging and short program demonstrations; assessment requirements must be confirmed.
Wellbeing / ATL Skills	Persistence, self-management, collaboration, logical reasoning and reflective problem-solving.

Abu Dhabi City Campus Daily/Weekly Planner

Standards	Provisional continuation of prior programming lessons; official Grade 12 Programming Week 11 scope not available.
Inquiry / TOK Question	How do testing and thoughtful decisions improve the reliability of a program?
Success Criteria (Measurable)	MUST: Identify variables and follow a program plan. SHOULD: Create and test a program using input, conversion and if/else. COULD: Debug independently and improve functionality.
National Identity Domain	UAE innovation: build a fictional everyday-use program that demonstrates responsible digital problem-solving.
