Week 11: 9th – 13th November 2026

Subject: Integrated Math I **Unit Title: Unit 1: Foundations of algebraic relationships** **Grade: 9**

Lessons	Learning targets	Assessment tools and strategies Formative/ Summative/ Summative Differentiation	Resources and links for Parents
Lesson 1: Writing equations in slope intercept form.	I can write equations in a slope-intercept form by using a slope and one or two points on a line.	2.1 Clarify vocabulary and symbols using visuals, connections, and supports. 8.2 Vary challenge level with differentiated tools, resources, and difficulty.	**Visual learning links:** **Lesson 1:** Writing equations in slope intercept form **Lesson 2:** Equations in standard and point slope form **Lesson 3:** Inverse functions
Lesson 2: Equations in standard and point slope form.	I can write and analyze linear equations by using point-slope and standard forms with given points, slope, and line relationships.		
Lesson 3: Inverse functions	I can find and interpret inverse functions by switching variables, using tables, graphs, and algebraic methods.		
Lesson 4: (Summative) GRASP – Final submission	I can use algebraic modelling, systems of equations, and mathematical reasoning to develop and evaluate a realistic UAE development project within a fixed budget of AED 50 million. I can communicate and justify my decisions using accurate calculations, equations, and appropriate mathematical representations		
Teacher's notes/ Reminders	- Make use of the notebook provided. - Resources used in class will be in the team's channel. - Extra practice sheets can be found on the teams shared folder. - **Please note that the upcoming summative will be written during your math lesson. Your teacher will share the study guide and answer key on toddle and teams. The scheduled date of the summative is determined by your math teacher. Some lessons will be moved due to the scheduling of the upcoming exam. Girls School has completed the Exam. Boys school exam will be scheduled during this week.** - **Homework: At the end of each PowerPoint students are required to complete the homework assigned.**		

	Mc Graw hill: Can be accessed on Toddle: 

Week 11

Technology Integration دمج التكنولوجيا	Mc Graw hill Teams Class Textbook/workbook.
Cross-curricular links لروابط بين المواد الدراسية	• Science: Writing and evaluating formulas (physics, chemistry); • Economics: Cost modelling, budget allocation, currency conversion • Geography/Social Studies: UAE urban development, sustainability, resource management
External Assessment Integration دمج التقييمات الخارجية	MAP – Common core 6+
Wellbeing/ ATL Skills ة النفسية / أساليب التعلم	Thinking skills: Critical thinking: evaluating models; Transfer: applying algebraic reasoning to new contexts Structured debates on expression form; model critique (Slide 9); debatable inquiry questions Communication skills: Writing to explain mathematical reasoning; presenting to an audience Two-column equation solving; written explanations on slides; 4–6-minute pitch Self-manageent skills: Organization: managing a multi-part project; Time management: meeting pitch deadlines

	Project journal; work periods with structured milestones; checklist in task document
Standards المعايير	• Writing equations in slope intercept form F.IF.4, F.IF.6, F.IF.9 • Equations in standard and point slope form F.IF.4, F.IF.6, F.IF.9 • inverse of linear functions F.IF.4, F.IF.6, F.IF.9
Inquiry/ TOK Question البحث والاستقصاء أسئلة	How can you solve an equation with the variable on each side?
Success Criteria (Measurable) معايير النجاح	**Lesson 1:** ▨ All students must be able to write an equation in slope-intercept form when given the slope and y-intercept. ◍ Most students should be able to write an equation when given the slope and a point, or two points. ▲ Some students could write and interpret equations from real-world data and justify the accuracy of their model. **Lesson 2:** ▨ All students must be able to write linear equations in point-slope and standard form given points and slope. ◍ Most students should be able to convert between forms and write equations for lines that are parallel or perpendicular. ▲ Some students could model real-world situations or analyze line relationships using multiple equation forms and justify their reasoning. **Lesson 3:** ▨ All students must be able to find the inverse of a relation or linear function using tables and graphs. ◍ Most students should be able to find and interpret the inverse of a linear function using algebra. ▲ Some students could evaluate and apply inverse functions in real-world contexts and explain their meaning.
National Identity Domain مجالات الربط بالهوية الوطنية	Volunteering التطوع Respect الاحترام History التاريخ التطبيقImplementation: National Identity Link - Students explore the four UAE sector choices (Tourism, Renewable Energy, Transport, Housing) through a brief gallery of real UAE projects
