**Week 9: 26 – 30 October 2026**

**Subject: MYP Design (Year 3)** **Unit Title:** AI-Assisted Product Prototyping & Campaign Design – Developing Ideas **Grade: 8**

| Lessons | Learning targets | Assessment tools and strategies<br>Formative/ Summative/ Differentiation | Resources and links for Parents |
|---|---|---|---|
| **Lesson 1:**<br>**Using AI Tools to Refine & Visualise the Chosen Concept** | • Turn their hand-drawn sketch into a clear, structured AI prompt.<br>• Create at least two AI-refined versions of their design and record each prompt and change in a Prompt Log.<br>• Compare the AI image with their original sketch and decide on one change they would make. | **Formative:** AI-Refined Concept & Prompt Log – teacher feedback against MYP Criterion B (strands ii–iii). Not graded; it prepares students for the Planning Drawings summative (W10.1).<br>**Check for learning:** Mentimeter exit ticket.<br>**Differentiation:** Support – fill-in-the-blank prompt card and word bank; Challenge – negative prompts and comparing two AI tools. | Lesson 1 PowerPoint (W9.1) – on Toddle<br>Prompt Log worksheet and prompt-formula card – on Toddle<br>School-approved AI image tool (e.g. Canva Magic Media / Adobe Express) |
| **Lesson 2**<br>**Comparing & Justifying the Chosen Design (Sketch vs AI Refinement)** | • Compare the hand-drawn sketch and the AI version against at least 3 design specifications.<br>• Choose which version (or a mix) to take forward and justify it with at least one specification.<br>• Explain one design decision they made that the AI did not capture. | **Formative:** Teacher observation, comparison-table check and gallery-walk peer feedback. Not graded.<br>**Check for learning:** Written exit ticket.<br>**Differentiation:** Support – part-completed comparison table and sentence starters; Challenge – justify with 2+ specifications and research evidence, and discuss the ethics of AI visuals. | Lesson 2 PowerPoint (W9.2) – on Toddle<br>Comparison & justification worksheet – on Toddle |
| **Homework** | • **Lesson 1:** Upload the sketch, AI-refined visuals and Prompt Log to Toddle.<br>• **Lesson 2:** Act on peer feedback and finalise the justification, ready for the Planning Drawings summative (W10.1). | Checked on Toddle by the teacher; feedback is given before the W10.1 summative. | Toddle – Week 9 assignments |
| **Teacher's notes/ Reminders** | • Students should bring their Week 8 hand-drawn sketch and a charged device to both lessons.<br>• AI tools are used only through school-approved platforms; students stay in charge of the design decisions.<br>• Coming up: Criterion B Planning Drawings summative in Week 10 (W10.1).<br>• Please ask your child: "Which design decision did you make that the AI could not?" | | |

## Week 9

| | |
|---|---|
| **Technology Integration** | Student devices, school-approved AI image generator (e.g. Canva Magic Media / Adobe Express), School AI for prompt support, Toddle, Mentimeter, Lesson 1 & 2 PowerPoints. |
| **Cross-curricular links** | ICT (how AI generators turn prompts into images); Art & Design (sketching, form and visual communication). |
| **External Assessment Integration** | Students practise MYP Criterion B (Developing Ideas) skills that are assessed in the IB MYP Design ePortfolio. |
| **Wellbeing/ ATL Skills** | • **Thinking:** turning a sketch into precise prompts; judging AI output against specifications.<br>• **Media literacy:** responsible, transparent use of AI tools.<br>• **Communication / Wellbeing:** justifying design decisions and giving respectful peer feedback. |
| **Standards** | • **MYP Design Criterion B:** strands ii–iii – a range of feasible ideas (hand-drawn and AI-refined) and a chosen design justified with the specification.<br>• **CS.AP.1:** Design and iteratively develop computational solutions using algorithms (draft → AI → refine).<br>• **CS.CS.1:** Describe how computing systems process, store and transmit information (how AI generators turn prompts into images). |
| **Inquiry/ TOK Question** | **Lesson 1:** Who made the design decisions – the designer or the AI?<br>**Lesson 2 (debatable):** Does using AI make a product design more innovative, or can it reduce a designer's originality and responsibility? |
| **Success Criteria (Measurable)** | The student has met the learning targets by:<br>• Generating at least one AI-refined visual from their own sketch (Lesson 1).<br>• Explaining the prompt(s) they used and why (Lesson 1).<br>• Stating which version (or combination) they are taking forward (Lesson 2).<br>• Justifying the choice using at least one design specification (Lesson 2). |
| **National Identity Domain** | Culture – Promotion of UAE innovation: students refine a product that solves a real UAE problem for the UAE Future Innovation Showcase.<br>Values – Responsibility and integrity: using AI honestly and transparently while staying in charge of the design decisions. |
