Abu Dhabi City Campus Daily/Weekly Planner

Week 11: 2–6 November 2026

Subject: Computer Science | Unit: Introduction to Cybersecurity Principles and Threats | Grade: 11

Lessons	Learning targets	Assessment tools and strategies Formative/ Summative/ Differentiation	Resources and links for Parents
Lesson 1: **Cybersecurity in Action** **Analysing Real-World Breaches**	I can analyse a cybersecurity breach by identifying failures in confidentiality, integrity and availability and explaining their causes and impacts.	Formative: Cyber Incident Analysis Activity; teacher questioning, discussion and feedback. Case Study Presentation: share evidence of CIA impacts and causes. Support: case summary, CIA prompts and vocabulary bank. Challenge: evaluate which safeguard would best address the cause.	Teacher-selected breach case studies; CIA reference sheet; incident analysis worksheet; presentation checklist. Parents: Ask which CIA principle was affected and how the breach could have been prevented.
Lesson 2: **Privacy in Digital Applications** **Safety & Responsibility**	I can recommend responsible app privacy practices by comparing two applications' policies and permissions and explaining their effects on individuals and society.	Formative: App Privacy Comparison Activity; peer discussion and teacher feedback. Digital Privacy Awareness Campaign: create a short peer-facing message or poster. Support: policy extracts, comparison grid and sentence starters. Challenge: justify a balance between useful features and data privacy.	Teacher-provided app privacy policies and permissions; comparison grid; campaign checklist. Use sample screenshots; no personal accounts required. Parents: Discuss one permission an app needs and one that may be unnecessary.
Homework	Refine the case-study findings and privacy-awareness message using feedback.	Self-check factual claims and explain recommendations with evidence.	Review the provided materials; do not share personal account details.
Teacher's notes/ Reminders	Build on prior CIA learning. Use public case-study material and sample app information. Protect personal data and give respectful, evidence-based feedback.		

Week 11

Technology Integration	Research public cybersecurity case studies; compare app privacy-policy extracts and permissions; use presentation or poster tools for peer awareness.
Cross-curricular links	Social Studies: societal impacts, rights and digital wellbeing. Business Studies: trust, financial impacts and organisational responsibility. Moral Education: ethical use of personal data.
External Assessment Integration	No external assessment task specified.
Wellbeing/ ATL Skills	Information literacy: examine evidence, differing interpretations of security features and whose perspectives are included. Personal responsibility: communicate appropriately about privacy. Character: consider ethical/legal access to personal information. ATL: research, critical thinking and communication.
Standards	PG 6: Recognize and analyze security concepts. Standard 4: Cybersecurity. CS.HS.4.1: Confidentiality, integrity and availability are core principles of cybersecurity. Analyse incidents and research real-world CIA impacts. CS.HS.4.2: Encryption is fundamental to data security and privacy. Compare app privacy policies and permissions; communicate healthy versus harmful practices. Include how encryption protects data and its limits.
Inquiry/ TOK Question	Lesson 1: How are CIA principles compromised in real-world cybersecurity breaches, and what caused these failures? Lesson 2: How do applications use privacy policies and permissions, and how do these practices affect individuals and society?
Success Criteria (Measurable)	Lesson 1 MUST: Identify the affected CIA principle(s) in one breach and support each with case evidence. SHOULD: Explain the cause and impacts on individuals and organisations. COULD: Evaluate two safeguards and justify which best addresses the cause. Lesson 2 MUST: Compare two apps using at least two privacy-policy or permission features. SHOULD: Explain effects on individuals and society and share safe practices with peers. COULD: Evaluate a privacy trade-off, including what encryption can and cannot protect, and justify a recommendation.
National Identity Domain	Support the UAE's vision of a secure, responsible digital society through awareness of cyber threats, privacy and ethical technology use. Apply learning to familiar UAE contexts such as school platforms, digital banking and government-service apps, without accessing personal data.
