Abu Dhabi City Campus Daily/Weekly Planner

Week 10: 2–6 November 2026

Subject: MYP Design | Unit Title: Designing Ethical AI Systems – Creating the Solution (Criterion C) | Grade: 7

Lessons	Learning targets	Assessment tools and strategies Formative / Differentiation	Resources and links for Parents
Lesson 1 **Planning the AI Prototype / Simulation: Design Stages**	I can construct a logical plan, in clear design stages, for building my AI prototype or simulation.	**Formative checkpoint C.i:** teacher observation, questioning and a planning check (unweighted). **Support:** partly completed plan template, stage cards and sentence starters. **Challenge:** identify a risk to the plan and a contingency.	Toddle: lesson slides and the Week 10 student worksheet (Part A – build plan). **Parents:** Ask your child to show you their plan and explain the 6 design stages and how long each will take.
Lesson 2 **Building the AI Prototype / Simulation (Part 1)**	I can follow my plan to build the first stages of my AI prototype or simulation, using technical skills carefully.	**FORMATIVE 1 of 2 (Criterion C.i–C.ii):** Prototype Build Check – teacher feedback against strands i–ii (unweighted; feeds into the final Criterion C summative). **Support:** step-by-step build guide and test table with sentence starters. **Challenge:** explain a change made while building, and why.	Toddle: Formative 1 task sheet, worksheet Parts B–D and Criterion C rubric. Google Teachable Machine: teachablemachine.withgoogle.com **Parents:** Ask your child to show you their AI prototype and explain how they tested it.
Homework	Complete the build plan (Worksheet Part A: stages, time, resources and test points) if not finished in class. Finish the Lesson 2 test table and change log (Worksheet Parts C–D) and upload screenshots of the build to Toddle.	Self-check the build plan, test table and change log against the MUST and SHOULD success criteria.	Check that the worksheet is complete and the build screenshots have been uploaded to Toddle.
Teacher's notes / Reminders	Lesson 2 is Formative 1 of 2 – students need a charged laptop/Chromebook (and webcam for Route A). Students must not use photos or voices of other students to train their AI – objects, drawings or their own voice (with permission) only. The Week 10 build is the starting point for Building Part 2 and refining the prototype using feedback in Week 11 (Formative 2 of 2).		

Week 10

Technology Integration	Google Teachable Machine (training and testing an image/sound model), Google Slides / Canva / Scratch for rule-based simulations, and Toddle for the digital worksheet and build evidence. Rules for using AI tools safely and responsibly.
Cross-curricular links	Mathematics: accuracy as fractions and percentages. Science: fair testing and recording results. Art & Design: screens, models and visual communication.
External Assessment Integration	No external assessment task this week. Formative 1 of 2 covers Criterion C i–ii.
Wellbeing / ATL Skills	ATL: self-management (organisation) – planning design stages and managing time realistically; thinking (critical thinking) – testing the prototype and improving it from the results. Wellbeing: safe and responsible use of data – protecting our own and others' privacy.
Standards	CS.MS.1.2; CS.MS.5.3 MYP Design Criterion C: C.i construct a logical plan outlining the efficient use of time and resources; C.ii demonstrate technical skills when making the solution.
Inquiry / TOK Question	How can I design and build an AI system that is accurate, fair and safe for the students in my school?
Success Criteria (Measurable)	**Lesson 1** **MUST:** Plan all 6 design stages needed to build the AI prototype or simulation. **SHOULD:** Give each stage a realistic time, resources and a test point. **COULD:** Identify a risk to the plan and a contingency. **Lesson 2** **MUST:** Build Stages 1–3 of the prototype by following the plan. **SHOULD:** Test the prototype with new inputs and record at least 5 test results. **COULD:** Explain a change made while building, and why.
National Identity Domain	Culture – promotion of technology, innovation and responsible, ethical artificial intelligence that support the UAE National Strategy for Artificial Intelligence 2031 and a future-ready, knowledge-based economy. Values – responsible digital citizenship, respect for privacy, fairness and critical thinking.
