Week 8 Unit: Designing Ethical AI Systems Grade: 7

Lessons	Learning targets	Assessment tools and strategies Formative/ Summative/ Differentiation	Resources and links for Parents
Lesson 1 Finalising and Presenting the Ethical AI Design Brief	I can present a complete, evidence-based, ethical design brief for my chosen AI solution.	Summative 1: Ethical AI Design Brief, assessed against Criterion A strands i–iii, maximum 8. Teacher observation and a final check provide unweighted formative feedback before submission.	Ask your child: What problem does your AI solution address? Who will use it? What research supports the need for it? Discuss whether it treats users fairly.
Lesson 2 Peer Feedback and Design Brief Refinement	I can use peer and teacher feedback to refine my design brief before moving into the design phase.	Unweighted peer and self-review, an improved brief and an individual exit reflection. Students record the change made and why. Support: feedback prompts and a checklist. Challenge: explain how changes strengthen the ethical justification.	Ask your child to show one improvement made after feedback. How does the change make the proposed AI solution more fair, accurate or responsible?
Home support	Discuss how AI decisions may affect different users and communities.	Encourage your child to explain their research evidence and respond thoughtfully to feedback.	Use class notes and the design brief. Check the toddle for any assigned homework.
Teacher notes and reminders	Please refer to toddle for task instructions and confirmed deadlines.		

Week 8 Learning Overview

Technology Integration	Students examine how AI systems use data and algorithms, considering accuracy, fairness and ethical impact.
Cross-curricular links	Business and English.
External Assessment Integration	Not specified for these lessons.
Wellbeing/ ATL Skills	Research, critical thinking, communication, collaboration and reflection. Students give constructive feedback and consider the wellbeing of AI users.
Standards	MYP Design Criterion A; summative assessed against strands i–iii. CS.MS.1.1; CS.MS.6.1.
Inquiry/ TOK Question	How does understanding AI systems through data and algorithms allow designers to evaluate their accuracy, fairness and ethical impact on users and communities?
Success Criteria (Measurable)	Lesson 1 MUST: Complete a brief stating the problem, users and proposed solution. SHOULD: Justify the need for the solution using research evidence. COULD: Evaluate the ethical implications of the proposed solution. Lesson 2 MUST: Identify one strength and one area for improvement from feedback received. SHOULD: Make at least one improvement to the brief. COULD: Explain how the improvement strengthens the ethical justification.
National Identity Domain	Technology, innovation, AI and ethical digital design support the UAE vision for a secure, innovative, knowledge-based economy. Students develop responsible digital citizenship, critical thinking and future-ready skills.
