Week 8: 19th - 23rd October 2026

Subject: Mathematics Accelerated | Unit 1: Numeric reasoning, equations and geometric relationships | Grade: 7ACC

Lessons	Learning targets	Assessment tools and strategies Formative/ Summative/ Summative Differentiation	Resources and links for Parents
Lesson 1: Complementary & Supplementary Angles	I can identify complementary and supplementary angles and use their relationships to find unknown angle measures.	2.1 Clarify geometry vocabulary and relationships using diagrams, worked examples, angle markings, scale models, and visual representations. 8.2 Vary challenge level with guided steps, differentiated practice, multi-step geometry problems, and extension tasks. Checks for understanding: Formative assessment covering current and previously taught concepts to monitor students' ongoing progress and understanding.	**Practice and review:** **Lesson 1:** Complementary & Supplementary Angles **Lesson 2:** Parallel Lines, Transversals & Triangles **Lesson 3:** Triangle Angle Relationships **Lesson 4:** Scale Drawings; Three-Dimensional Figures
Lesson 2: Parallel Lines, Transversals & Triangles	I can identify angle relationships formed by parallel lines and a transversal and use them to find unknown angles and analyze triangle conditions.		
Lesson 3: Triangle Angle Relationships	I can use the triangle angle-sum theorem and exterior-angle relationships to solve problems.		
Lesson 4: Scale Drawings; Three-Dimensional Figures	I can use scale drawings to determine actual measurements and describe cross-sections of three-dimensional figures.		
Teacher's notes / Reminders	Use workbooks for worked examples and practice. Upload slides, worksheets, homework, and review guidance to Teams. Students access McGraw Hill through Toddle.		

Week 8

Technology Integration دمج التكنولوجيا	Teams for slides, practice, and homework. McGraw Hill through Toddle.
Cross-curricular links لروابط بين المواد الدراسية	Art, design, and technology: students explore angle relationships and scale in Islamic geometric patterns, UAE architecture, floor plans, and structural design.
External Assessment Integration دمج التقييمات الخارجية	Common Core geometry reasoning, spatial relationships, scale, and multi-step problem-solving skills.
Wellbeing/ ATL Skills ة النفسية/ أساليب التعلم	Thinking: identify geometric relationships and choose the correct rule or representation. Communication: justify solutions using mathematical vocabulary, diagrams, and notation. Self-management: organize diagrams, label measurements clearly, and check calculations. Social: compare methods and give constructive feedback during partner work.
Standards المعايير	7.G.B.5, 8.G.A.5, 7.G.A.2, 7.G.A.1, 7.G.A.3
Inquiry/ TOK Question البحث والاستقصاء أسئلة	How can knowing one angle help us determine several others? What conditions guarantee that a triangle can be constructed uniquely? How does a scale factor connect a drawing to real measurements?
Success Criteria (Measurable) معايير النجاح	Lesson 1: ■ All students must identify complementary and supplementary angle pairs. ● Most students should calculate an unknown angle using 90° or 180°. ▲ Some students could write and solve an equation involving complementary or supplementary angles. Lesson 2: ■ All students must identify angle pairs formed by parallel lines and a transversal. ● Most students should find missing angles using angle relationships. ▲ Some students could determine whether given conditions produce a unique triangle and justify their answer. Lesson 3: ■ All students must use the triangle angle sum to find a missing angle. ● Most students should solve problems involving exterior angles or unknown variables. ▲ Some students could solve multistep angle problems and justify each relationship used. Lesson 4: ■ All students must use a scale drawing to determine an actual length and identify a simple cross-section. ● Most students should calculate actual lengths or areas from scale drawings and describe cross-sections of 3D figures. ▲ Some students could solve multistep scale problems and justify how a cross-section changes with the cutting plane.
National Identity Domain	Volunteering التطوع Respect الاحترام History التاريخ

مجالات الربط بالهوية الوطنية	المجال Area: UAE innovation, architecture, and design. Students connect angle relationships and scale drawings to Islamic geometric patterns, UAE landmarks, school buildings, and public spaces.
	التطبيق Implementation: Students analyze geometric patterns, angle relationships, and a scaled floor plan of a UAE landmark or school building. They then finalize their geometric clue station for the GRASPS task and check that the clue is clear, accurate, and solvable.
