Week 9: 26th – 30th October 2026

Subject: Mathematics Accelerated

Unit Title: Unit 1: Numeric reasoning, equations and geometric relationships

Grade: 7

Lessons	Learning targets	Assessment tools and strategies Formative/ Summative/ Summative Differentiation	Resources and links for Parents
Lesson 1: Translations	I can translate 2D shapes on a coordinate plane using a given direction and distance and describe how translations affect the position of a shape.	2.1 Clarify vocabulary and symbols using visuals, connections, and supports. 8.2 Vary challenge level with differentiated tools, resources, and difficulty.	**Practice links/review links:** **Lesson 1: Translations** **Lesson 2: Reflections** **Lesson 3: Rotations**
Lesson 2: Reflections	I can reflect a shape across a line of reflection and describe how the original shape and its image are related.		
Lesson 3: Rotations	I can rotate 2D shapes on a coordinate plane using a given centre of rotation and angle, describe how the rotation changes the position and orientation of a shape.		
Lesson 4: Formative 3: Angles and Parallel lines	I can identify and justify the angles, and i can find the angles when parallel lines are present.		
Teacher's notes/ Reminders	- Make use of the notebook and workbook provided. - PowerPoints and additional notes/practice will be uploaded on teams – under the shared/files section. **Mc Graw hill: Can be accessed on Toddle:**

Week 4

Technology Integration دمج التكنولوجيا	MAGMA Teams Class Textbook/workbook.
Cross-curricular links لروابط بين المواد الدراسية	Design/Digital Design: puzzle and lock-mechanism design connects to systems thinking and user experience.
External Assessment Integration دمج التقييمات الخارجية	MAP – Common core 6+
Wellbeing/ ATL Skills ة النفسية/ أساليب التعلم	Thinking skills: Identify structure and equivalence when solving equations and analysing transformations; recognize patterns in integer/rational-number operations. Communication skills: Use precise algebraic and geometric vocabulary and notation. Self-management skills: Work carefully and check solutions when solving multi-step equations and inequalities. Social skills: Collaborate to critique and justify whether two figures are congruent or similar.

Standards المعايير	7.NS.A.2 (fractions/decimals), 7.NS.A.2.D 7.NS.A.3 7.EE.B.4.A
Inquiry/ TOK Question البحث والاستقصاء أسئلة	How can translations, rotations, and reflections transform a shape while preserving its size and shape, and how can we describe these transformations mathematically?
Success Criteria (Measurable) معايير النجاح	**Lesson 1:** 🟦 All students must translate a shape horizontally and vertically on a coordinate plane. 🔵 Most students should be able determine the new coordinates of each vertex after a translation. 🔺 Some students could write a translation rule using coordinate notation, such as (x, y) to (x+3, y-2). **Lesson 2:** 🟦 All students must reflect a shape across a horizontal or vertical line. 🔵 Most students should be able explain how the image is positioned relative to the line of reflection. 🔺 Some students could reflect shapes across diagonal lines, such as (y=x). **Lesson 3:** 🟦 All students must rotate a shape in the specific degree using a center of rotations. 🔵 Most students should be able to describe the rotation using the angle, direction and center of rotation. 🔺 Some students could explain how different rotations affect the position and orientation of a shape while preserving its congruence. **Lesson 4:** 🟦 All students must complete the formative 🔵 Most students could apply the content taught to the real-life questions 🔺 Some students could apply and create their own question base on the content
National Identity Domain مجالات الربط بالهوية الوطنية	Volunteering التطوع Respect الاحترام History التاريخ

	المجالArea: students explore examples of logic puzzles, Islamic geometric patterns, and UAE STEM/innovation challenges as inspiration for well-designed problems.
	التطبيقImplementation: Suggested AI Tools for Student Use (Research and Innovation): AI chatbots for clue-wording and prompt practice (e.g., school-approved AI assistants); AI-powered puzzle/logic generators; teacher-curated AI tool comparison activity (students select, use, evaluate, and justify their AI tool choice as part of the GRASPS reflection). Note: All AI tools must be used in line with the ENS Academic Integrity Policy. Students must document all AI tool usage, prompts, and responses in their puzzle portfolio.
