Grade 6 Design Technology Weekly Parent Update

Unit: Fair, Smart, Ethical AI for UAE Smart City Grade: 6

Lessons	Learning targets	Assessment tools and strategies Formative/ Summative/ Differentiation	Resources and links for Parents
Lesson 2 (W5.2) Criterion A Summative	I can inquire into and analyse a real smart city problem to justify the need for an AI solution.	Summative 1: Criterion A report, strands A.i–A.iv, assessed using an MYP achievement level of 1–8. Students explain the problem, identify research needs, analyse an existing product and present their findings.	Ask your child: What UAE city problem did you investigate? What evidence supports your proposed AI solution? Review their research report together.
Lesson 1 (W6.1) Success Criteria and Design Idea A	I can develop success criteria for a fair AI solution and present a feasible first design idea.	Formative: teacher observation, questioning, discussion and reflection. Students list success criteria and produce a labelled sketch showing the problem, data and users. Support: prompts and labelled examples. Challenge: justify criteria addressing bias or ethics.	Ask your child to explain their labelled sketch and how the solution will be fair, accurate and safe. Use their class notes and design sketch for discussion.
Home support	Discuss a smart city challenge and how an AI solution could help.	Encourage your child to explain their own thinking and check their work against the success criteria.	No additional homework or submission date is specified in this update.
Teacher notes and reminders	Please refer to the school learning platform for any task instructions or confirmed deadlines.		

Learning sequence: W5.2 to W6.1

Technology Integration	Use of class digital resources to research AI and communicate design ideas.
Cross-curricular links	Arabic and English; Moral Education and UAE Studies; Visual Arts.
External Assessment Integration	Not specified for these lessons.
Wellbeing/ ATL Skills	Research, critical thinking, communication and reflection. Students consider how technology affects different users.
Standards	MYP Design: Criterion A, strands A.i–A.iv; Criterion B, strands B.i–B.ii.
Inquiry/ TOK Question	How can a fair, smart and ethical AI system solve a real smart city challenge and support responsible development in the UAE?
Success Criteria (Measurable)	Criterion A MUST: Explain the problem, identify research needs, describe an existing product and present findings. SHOULD: Support each strand with clear evidence. COULD: Show insight into fairness, bias or ethics. Criterion B MUST: List success criteria and sketch and label Design Idea A, including the problem, data and users. SHOULD: Link criteria to fairness, accuracy and safety; explain basic algorithm steps. COULD: Add original criteria addressing bias or ethics.
National Identity Domain	UAE innovation and sustainability: connect solutions to Abu Dhabi, Dubai or Masdar City. Values: fairness, safety and responsible digital citizenship.
