# Abu Dhabi City Campus Daily/Weekly Planner

**Week 10: 2nd – 6th November 2026**

**Subject: Mathematics Pre-AP Geometry with Statistics** **Unit Title: Measurement in Data** **Grade: 9**

| Lessons | Learning targets | Assessment tools and strategies<br>Formative / Summative / Differentiation | Resources and links for Parents |
|---|---|---|---|
| **Lesson 1:**<br>**Bias in Experiments, Response Bias & Survey Bias** | I can identify bias in experiments and surveys, explain how it affects the data collected, and propose ways to reduce it. | 5.3 Model one scenario before independent analysis.<br>2.3 Represent bias through annotated scenarios, question wording, simple data examples and written explanations. | Relevant Videos<br>Pre-AP Geometry, Lesson 1.3.4 Identify biases in sampling methods for experiments, observational st |
| **Lesson 2:**<br>**Formative Assessment** | I can analyse a data-collection scenario and explain how accuracy, precision, sample size, method and bias affect the strength of a conclusion. | 2.1 accessible wording, key-term reference sheet and clearly separated parts | |
| **Lesson 3:**<br>**Review for Summative** | I can connect concepts across the to analyse data, evaluate a statistical claim and justify a conclusion using evidence. | 8.2 Sequence scenarios from familiar school contexts to less familiar multi-constraint situations while maintaining grade-level reasoning demand. | |
| **Lesson 4:**<br>**Unit 1 Summative Assessment** | I can use statistical and probability concepts to analyse an unfamiliar situation, evaluate the quality of evidence and justify a conclusion about data. | 8.2 Sequence scenarios from familiar school contexts to less familiar multi-constraint situations while maintaining grade-level reasoning demand. | |
| **Homework** | Sample Size & Representation, Methods of Gathering Data, Observational Studies & Surveys and Appropriate Data Collection Method. | | |
| **Teacher's notes / Reminders** | **Grade 9 PreAP math summative will be in week 10:**<br>**Girls'campus: 5 November 2026, Thursday**<br>**Boys'campus: 5 November 2026, Thursday**<br>**Materials for the summative have been shared on toddle/teams.**<br>Students should bring a device, scientific calculator and notebook and have access to the PPTs. | | |

| | |
|---|---|
| **Technology Integration** | Teams/OneNote; spreadsheet/GDC; probability and contingency-table resources; data-display review materials; survey and experiment scenarios; digital quizzes where appropriate. |
| **Cross-curricular links** | Science: experimental design, measurement quality and sources of error. |

| | |
|---|---|
| | Social Sciences/Civics: survey wording, sampling and community views.<br>Business/Economics: biased customer surveys and evidence-based decisions.<br>ICT/Data Science: digital displays, simulations and survey-response analysis. |
| **External Assessment Integration** | Direct alignment with College Board Pre-AP Geometry with Statistics, Unit 1: Measurement in Data. Lesson 1 targets 1.3.4; Lesson 2 checks 1.3.1–1.3.4; Lesson 3 reviews 1.1–1.3; Lesson 4 assesses all Unit 1 concepts. |
| **Wellbeing/ ATL Skills** | **Thinking:** identify patterns, calculate, analyse data quality, evaluate methods and justify conclusions.<br>**Communication:** use statistical vocabulary, show working and support claims with evidence.<br>**Self-management**: organise revision, monitor readiness, correct errors and manage assessment time.<br>**Social:** provide respectful peer feedback during review. |
| **Standards** | Pre-AP Geometry with Statistics – Unit 1: Measurement in Data.<br>Key Concept 1.1: The Shape of Data — displays, centre and spread.<br>Key Concept 1.2: Chance Events — categorical displays, probability, distributions, relative/joint/marginal/conditional frequencies and independence.<br>Key Concept 1.3: Inferences from Data — accuracy, precision, measurement bias, sample size/representation, data-collection methods and bias in experiments, observational studies and surveys. |
| **Inquiry/ TOK Question** | How do the way we organise data, model chance and collect evidence affect the conclusions we can responsibly draw about a population? |
| **Success Criteria (Measurable)** | **Lesson 1: Bias in Experiments, Response Bias & Survey Bias**<br>• **All students must** identify a source of bias in an experiment or survey.<br>• **Most students should** explain how bias may affect the data or conclusion.<br>• **Some students could** redesign the procedure or question to reduce bias and justify the improvement.<br>**Lesson 2: Formative Assessment**<br>• **All students must** demonstrate core understanding of accuracy, precision, sample size, methods and bias.<br>• **Most students should** interpret scenario evidence and justify answers with statistical vocabulary.<br>• **Some students could** evaluate a flawed investigation and propose a defensible improvement.<br>**Lesson 3: Unit 1 Review**<br>• **All students must** recall and apply key ideas from Unit 1.1–1.3.<br>• **Most students should** solve mixed problems and interpret results in context.<br>• **Some students could** connect multiple concepts to evaluate a claim and defend a conclusion.<br>**Lesson 4: Unit 1 Summative Assessment**<br>• **All students must** answer core questions across all three Key Concepts. |

| | |
|---|---|
| | • **Most students should** interpret displays, calculate relevant quantities and justify conclusions.<br>• **Some students could** evaluate an unfamiliar investigation, identify limitations and propose improvements. |
| **National Identity Domain** | Belonging/Citizenship: use school and UAE community contexts when examining data and survey evidence.<br>Respect: critique questions, methods and conclusions rather than individuals; consider different perspectives fairly.<br>Responsible decision-making: evaluate evidence quality and limitations before accepting claims. |
| | Area: Citizenship. Implementation: students use data responsibly and recognise that survey wording and sampling choices affect which voices are represented. |
| | Area: Responsible decision-making. Implementation: students identify limitations and bias, avoid overclaiming and support conclusions with evidence. |
