Abu Dhabi City Campus Daily/Weekly Planner

Week 9: 26–30 October 2026

Subject: Computer Science | Unit Title: Introduction to Cybersecurity Principles and Threats | Grade: 11

Lessons	Learning targets	Assessment tools and strategies Formative/ Summative/ Differentiation	Resources and links for Parents
Lesson 1: **Understanding the CIA Triad**	I can explain confidentiality, integrity and availability using everyday cybersecurity examples.	Learning check: Match the three CIA principles to examples and explain answers in pairs. Differentiation: Keyword bank and guided examples; extension: explain scenarios where two principles overlap.	Teacher PowerPoint: CIA Triad introduction Student notes and scenario cards
Lesson 2: **CIA Triad in Real-World Scenarios**	I can analyse cybersecurity scenarios to identify which CIA principle is compromised and justify the impact.	FORMATIVE: CIA Scenario Analysis (individual worksheet). Students identify compromised principles and justify their reasoning for 3 cases. Teacher feedback targets accuracy and explanations. Differentiation: Scaffolded prompts; extension: recommend a prevention measure.	CIA Scenario Analysis formative worksheet CIA Triad PowerPoint / revision notes
Homework	Review the CIA Triad definitions and write one example of each from daily digital life.		
Teacher's notes/ Reminders	One graded formative assessment in Lesson 2. Prepare three accessible cases (e.g., leaked school data, altered grades, unavailable school portal).		

Week 9

Technology Integration	Teacher PPT, classroom scenario cards and a digital or paper formative worksheet.
Cross-curricular links	Social Studies: privacy and trust in digital society. Business Studies: organizational protection of data and services.
External Assessment Integration	Case-based problem solving aligned with high-school cybersecurity standard CS.HS.4.1.
Wellbeing/ ATL Skills	Critical thinking, responsible digital citizenship, peer discussion and respectful handling of sensitive information.
Standards	PG 6: Recognize and analyze security concepts. CS.HS.4.1: Confidentiality, integrity and availability (CIA) are core principles of cybersecurity.
Inquiry/ TOK Question	How can we identify which CIA principle has been compromised in a cybersecurity incident, and explain its impact?
Success Criteria (Measurable)	**Lesson 1 – Understanding the CIA Triad** **MUST:** Define confidentiality, integrity and availability and give one example of each. **SHOULD:** Correctly match at least 4 of 5 everyday cybersecurity examples to a CIA principle. **COULD:** Explain how two CIA principles could be affected in one incident. **Lesson 2 – CIA Triad in Real-World Scenarios** **MUST:** Identify the compromised CIA principle in at least 2 of 3 scenarios. **SHOULD:** Justify the identified principle using evidence and explain its impact in at least 2 scenarios. **COULD:** Analyse a scenario involving multiple CIA principles and recommend a suitable protective measure.
National Identity Domain	Culture: Support the UAE vision for a secure digital society. Values: Privacy, trust, responsibility and safe technology use.
