Week 11: 9–13 November 2026

Subject: Design **Grade: 6 — MYP Year 1** **Unit 2: Designing a Fair, Smart, and Ethical AI System for a Future UAE Smart City**

Lessons	Learning targets	Assessment tools and strategies Formative / Summative / Differentiation	Resources and links for Parents
Lesson 1 **Develop my design** **B.i–iv** **GRASP Part 1**	I can develop my own AI solution by listing success criteria, sharing different ideas, choosing one and drawing a clear plan. B.i List success criteria. B.ii Show feasible design ideas. B.iii Present the chosen idea. B.iv Draw a labelled plan and list what I need.	Summative: One B–C GRASP portfolio. B evidence: success criteria, two ideas, chosen design with reasons, and a labelled diagram / storyboard with requirements. Check: Can a partner explain the design? Support: Visual examples, word bank, sentence starters and planning frame. Challenge: Explain a fairness or privacy trade-off.	Original Smart City GRASP brief; Criterion B task instructions and rubric; design portfolio template. Use the class materials shared by the teacher. At home: Ask your child which UAE city problem their own design will solve.
Lesson 2 **Create my solution** **C.i–iv** **GRASP Part 2**	I can create a simple model of my AI solution by planning my steps, using digital skills, following my plan and recording changes. C.i Outline steps, time and resources. C.ii Show technical skills. C.iii Follow my plan to make the model. C.iv List changes to my design and plan.	Summative: Continue the same portfolio. C evidence: making plan, prototype, screenshots of skills / progress and a change log. B and C: each out of 8 using their rubrics. Check: Preview input → process → output. Support: Short steps, visual checklist, teacher check-ins and agreed accessible input. Challenge: Improve a feature and explain its benefit.	Canva on iPad; teacher demonstration; making-plan template; Criterion C rubric and evidence checklist. Create a short animated model showing how the chosen AI solution works. At home: Ask your child to show the steps and explain one change.
Homework	Complete the B–C GRASP during class. Bring your earlier research, design work and a fully charged iPad. Keep all evidence in one portfolio.		
Teacher's notes / Reminders	Original GRASP goal: Design a fair, smart, and ethical AI system that solves a real problem in a future UAE Smart City. Students keep their own AI solution and model its behaviour in Canva. Save all design and making evidence together.		

Week 10: 2–6 November 2026

Technology Integration	Canva on personal iPads to create a simple animated prototype; screenshots to record making skills and progress; the class platform for instructions and submission.
Cross-curricular links	English: clear labels, explanations and design choices. Science and computing: input, process and output. Moral Education: fairness, privacy, safety and human responsibility.
External Assessment Integration	Not applicable. The B–C GRASP is an internal MYP Design summative assessment.
Wellbeing / ATL Skills	Creative thinking: generate different ideas and improve a solution. Communication: use labelled drawings and explain choices. Self-management: plan time and resources, save evidence and follow steps. Wellbeing: use a short checklist and ask for help when needed.
Standards	MYP Year 1 Design — Criterion B Developing ideas: B.i success criteria; B.ii feasible ideas; B.iii chosen design; B.iv planning drawings and requirements. Criterion C Creating the solution: C.i plan time and resources; C.ii demonstrate technical skills; C.iii follow the plan and create a functioning solution; C.iv list changes to the design and plan.
Inquiry / TOK Question	How can our design choices make an AI solution helpful, fair and safe for people in a future UAE Smart City?
Success Criteria (Measurable)	MUST: Complete evidence for B.i–iv: at least 3 success criteria, 2 design ideas, 1 chosen design and 1 labelled planning diagram with requirements. Complete C.i–iv: a sequenced making plan with time and resources, visible technical skills, a working animated model and a record of changes (or state that none were needed). SHOULD: Link the chosen design to the criteria; show clear input → process → output; use screenshots to show the plan was followed and list any changes clearly. COULD: Compare a design trade-off, improve a feature for fairness or privacy, and explain how the change benefits users.
National Identity Domain	Values — Respect: design fair, safe solutions that protect users' privacy. Citizenship — Belonging: address a real problem for people in a future UAE Smart City. Students use their chosen UAE context and consider different users' needs.
